

DT-3841

A LOCKING DEVICE OF A CLOSURE WITH A HOUSING

Background of the Invention

1. Field of the Invention

0001. This invention relates to a device for locking a closure with a housing, particularly of a laboratory centrifuge.

2. Description of the Prior Act

0002. Laboratory centrifuges require to be safely locked when in operation in order to avert dangers of accident caused by a contact with the rotor rotating at a high speed or with content which is centrifuged out. A safe device for locking a closure with a housing is also necessary in many other devices. For example, it can be used with the front flap of a washing machine or the trunk lid of a motor vehicle.
